

Boa Horse Boot™ Gaiter Fitting

1. Fold the hoof plate to a 90° angle at the fold-line (see diagram →), towards the inside of the Gaiter (the side without the Boa logo).

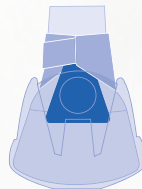

2-3. Insert the Gaiter into the Boa Horse Boot, prior to booting the horse. Press the hoof plate down snugly onto the sole of the boot.

4-5. Fold the neoprene “upper” cuff down over the outside back of the boot, and slip the Boa Boot onto the hoof, holding the Gaiter in place with one hand. Let the horse stand down, resting the hoof flat on the ground.

6. Unfold the Gaiter so the cuff is standing loosely upright, around the pastern. **(a)** If you are using the optional Front Cushion (a pair is enclosed with your Gaiters), attach it now (see diagrams →).

- Wrap the locking fabric “loop” side of the Gaiter forward, around the front of the pastern.
- Press the “hook” side of the fabric Cushion tab onto the Gaiter “loop.” Note that the Cushion’s locking tab should be at the top, with the wide end of the Cushion at the bottom.
- Once attached, the Cushion should be aligned down the middle of the front of the hoof, so it will be behind the dial area of the boot.

7-8. Fasten the Gaiter snugly around the pastern (over the top tab of the attached Cushion, if it is being used - see information above).

More instructions for applying and fitting the Boa Gaiter can be seen on page 9 of the Boa Horse Boot brochure, or at www.boahorseboot.com.
