**62-92000**

## **Instructions for Use Of Clipper Blade Sharpening Kit**

- (1) Remove block and place on firm flat surface with squared side up.
- (2) Place a quarter size dab of compound to center of block. Do not spread across block. Add small amounts of compound gradually.
- (3) Place blade on compound (cutting surface down)
- (4) Hold blade with thumb on left side and finger on right side then applying equal pressure move in figure 8 motion across the entire surface of block until blade has a consistent smooth dull grey finish and is clear of dirt, rust, debris and abrasions.
- (5) Complete steps 1 through 4 with second blade.
- (6) Wash blades with soap and hot water. Using brush, remove excess compound that may lodge between teeth. Dry with lint free cloth.
- (7) Turn block over with smooth side up repeating figure 8 motion (with no compound) until blades have a bright glossy finish across entire cutting surface.

**IMPORTANT: Smooth side of block must remain free of compound at all times.**
